Its pretty awesome overall. Everything you want in a touch pc not limited by IOS or Android markets, It runs windows 7 and can handle Adobe CS. Even pressure sensitive in photoshop. The only downside is even though the tablet never gets hot, for some reason the fan is always on. I read that this is a bug not yet solved. Still, I find it to be the best computer for all general purposes.

UPDate: After sending the tablet into Asus, the tablet was returned With a quiet fan making this the Best Tablet on the market.
